

Competency	Ways to Demonstrate
1 Map data to appropriate visual channels	*Accurately complete a1, 2 *Employ theoretically sound data-visual mapping on p1 of a3, 4, 5, or 6 AND accurately describe the mapping in p2 of a3, 4, 5, or 6 *In a critique, thoughtfully help a classmate correct a data-visual mapping mistake or improve their data-visual mapping. The critique must reference the theory supporting your suggestions
2 Accurately encode data values via color	*Employ theoretically sound encoding of data via color on p1 of a3, 4, 5, or 6 AND accurately describe the encoding in p2 of a3, 4, 5, or 6 *In a critique, thoughtfully help a classmate correct a color encoding mistake or improve their color mapping. The critique must reference the theory supporting your suggestions
3 Apply perceptual concepts to visualization design	*Leverage perception to complete a concrete objective on p1 of a3, 4, 5, or 6 AND accurately describe the use of perception and why it works in p2 of a3, 4, 5, or 6 *In a critique, thoughtfully help a classmate correct an unintended illusion caused by perception. The critique must reference the theory explaining the illusion and supporting your suggestions
4 Appropriately use visual embellishment	*Leverage visual embellishment to complete a concrete objective on p1 of a3, 4, 5, or 6 AND accurately explain why you chose it and how it supports the objective in p2 of a3, 4, 5, or 6 *In a critique, thoughtfully suggest how a classmate may implement visual embellishment to improve their visualization's impact. The critique must reference the theory supporting your suggestions
5 Create a data story using storytelling techniques	*Design and implement a data story for p1 of a3, 4, 5, or 6 AND accurately describe what storytelling techniques are used and why they were chosen in p2 of a3, 4, 5, or 6 *In a critique, thoughtfully suggest how a classmate might improve their data story, or make their visualization into a data story to improve its visualization's impact. The critique must reference the theory supporting your suggestions
6 Design and implement an accessible visualization	*Design and implement an accessible visualization for p1 of a3, 4, 5, or 6 AND accurately describe three specific reasons the visualization is accessible in p2 of a3, 4, 5, or 6 *In a critique, thoughtfully suggest how a classmate's visualization may be modified to be more accessible. The critique must reference the theory supporting your suggestions
7 Apply data humanism and feminism ideas to visualizations	*Employ data humanism and feminism theories in the design of p1 of a3, 4, 5, or 6 AND accurately describe which theories influenced the design and how in p2 of a3, 4, 5, or 6 *In a critique, thoughtfully suggest how a classmate may employ data humanism and feminism ideas to improve their visualization. The critique must reference the theory supporting your suggestions
8 Write a thoughtful and actionable critique of someone else's work	*Provide at least 2 critiques that are thorough, kind, clear, succinct, actionable, and provide feedback supported by visualization theory
9 Redesign a visualization based on critiques	*Provide a reflection that explains clearly and succinctly how you would redesign a2, 4, or 5 based on feedback received from classmates or the instructor *Provide evidence in a6 that your redesign implements feedback received from classmate critiques or the instructor
10 Positively contribute to the classroom community	*Be present for AND actively participating in 80% of class meetings (modified as needed based on ARC accommodation letters) *Kindly answer a classmate's unanswered question on Slack *Volunteer to partner with classmates looking for groups during in-class activities or out of class assignments OR regularly change who you work with *Help a classmate troubleshoot a problem or issue *Attend an SDS or CSC talk or event and stop by office hours to tell Ab what you thought about it *Go above and beyond in a critique, reflection, or assignment
